

## BRAKE CIRCUIT IDENTITY CARD

**AUTÓDROMO  
HERMANOS RODRÍGUEZ**

The layout of the Mexico City track, along with the high altitude, imply very high temperature conditions for discs and pads, making the circuit one of the most critical in terms of temperature management.

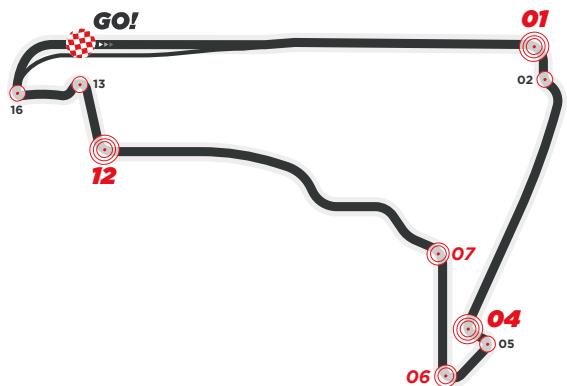

The engines in the single-seaters, being turbocharged, do not suffer from the altitude, guaranteeing the same performance as at sea level, whereas the air used to cool the brakes is decidedly less efficient due to the lower density.
